

Lift and Tilt Tilt Module

Dual tilt module for extra long rack. Olympic Lift and Tilt has the lowest profile at 8.25".

Maximum flexibility at off-the-shelf pricing

TILT MODULE
The low profile tilt module can be used alone or added to a lift. Sturdy construction can stand up to abuse from forklift trucks. Continuous hinge provides stability and safety by eliminating pinch points.

Typical tilt is limited to 45°. Tilt limit can be easily customized to exact customer specification - maximum limit is 90°.

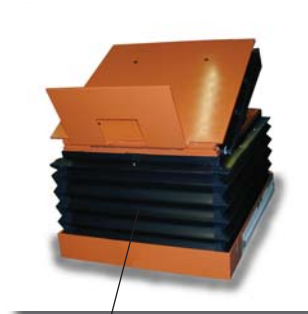

Dual dampening struts eliminate uncontrolled movement or bouncing

LIFT AND TILT
High capacity lifting integrated with a tilt module positions material at the optimum height and angle.

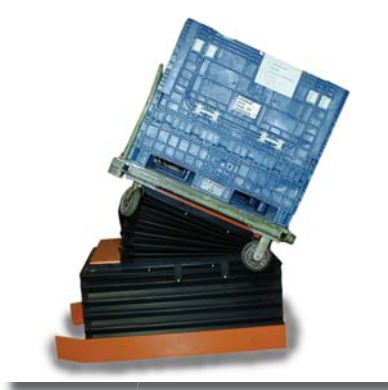

Dual captured track safely controls tilting angle and movement.

DESIGNED-IN FLEXIBILITY
Olympic Lifts deliver the best value for your investment because the system is designed to use existing Herkules components for customized applications. 90% of the design and engineering required to meet your needs has already been completed in this modular system.

Safety skirting keeps debris out and provides protection from pinch points. Available in traditional vinyl or new polyethylene.

CUSTOMIZATION
Customers can specify size and design of the top plate. Corner retainers and full-face gussets can be customized to exact application needs.

MATERIAL POSITIONING
 Optimum material height and position facilitate continuous production. Flexible configurations including lift, lift and tilt, or tilt only enable easy positioning of material handling carts.

LOW PROFILE OF LIFT MODULE
 In its lowered position, the Olympic lift is 4" high. The low profile can accommodate both a wider range of ergonomically correct worker heights and increased shipping densities which reduces shipping costs.

LIFT & TILT SPECIFICATIONS

Closed height - lift and tilt	8.25"
Open height - lift and tilt	up to 83.25"
Capacity of lift module	virtually any load

herkules equipment corporation

Herkules Equipment Corporation is the leading manufacturer of high-capacity, air-operated lifts. For more than 25 years Herkules lifts have been recognized worldwide for lifting capacity, durability, flexibility and ease of use.

Lifts powered by Herkules' proprietary Air-Bag™ technology are clean, environmentally friendly, and virtually maintenance free. Used in a variety of industrial and vehicle service applications, air bag lifts are hydraulic free, requiring only a compressed air connection. The heavy duty air bags are built for rugged daily use, giving your facility a lifetime of trouble-free operation.

In manufacturing plants, vehicle service shops and government facilities, Herkules air-bag lifts surpass all others for lift capacity, low cost of operation and absence of potential environmental hazards.
