Herkules Air-Powered Operator Positioning Systems Easily Customized

Walled Lake, Michigan August 9, 2006. Herkules' Operator Positioning Systems, easily customized, offer the lowest profile in the industry at 4.25" closed. Each system is designed and built with Herkules standard stocked lift modules, providing cost efficient customization. The low profile allows for surface mounting, making cost of installation minimal.

A Herkules Operator Positioner can greatly improve ergonomics in the workplace since it is adjustable to numerous elevations, accommodating a variety of tasks and different worker heights. Back strain and injuries are reduced and productivity is increased.

Herkules' Air Bag™ technology, incorporated into all of our lifting systems, is environmentally friendly and virtually maintenance free. This power source provides a patented direct one-to-one lift ratio, eliminating the need for mechanical linkage to lift the load, in turn minimizing wear and maintenance. The lifting motion is smooth and stable. Hydraulic systems require replacement of messy fluids, often leave ugly stains from leaks, and involve downtime for maintenance which can slow a facility's productivity.

Designed per the customer's specifications, the Operator Positioning System can provide a travel height up to 75", and dimensions as wide and long as needed. Options include: handrails; operator gateways; risers; anti-fatigue matting; multiple lift controllers; perimeter toe kicks; pivoting ramps; special surface compositions; independent stairways or ramps; hand or foot operation; track mounted; and high speed.

For more product information, contact Herkules at 800-444-4351, or email info@herkules.us. Visit our website at www.herkules.us.

Herkules Equipment Corporation has been manufacturing Pneumatic Lifting Equipment for over 20 years, including (custom & standard) Lift Tables, Lift & Rotates, Lift & Tilts, Operator Positioners, Power Rotate Systems, Lifts for Integration, Cart Positioners, Pallet Positioners, and Vehicle Lifts.
